

Job Title: Full Stack Java Developer

Salary: Competitive

Location: Various

Job Type: Full-time, hours: 8.30am to 5pm

The Software Developer team is responsible for creating technical solutions to support our key clients worldwide.

You and your role

You aren't bothered about titles or hierarchy; what really excites you is problem-solving and the opportunity to deliver innovative technology that carries real value for users. Comfortable in a Pair Programming environment, you will draw value from collaboration with others, actively seek input from colleagues and thrive as part of a multidisciplinary team.

You are an experienced Dev with a toolbox full of skills, so you know what works. We will empower you to do your job in the way that works best for you. Our leadership clears away the noise and distractions so that you can have the autonomy and ownership to challenge, question and do the right thing at the right time.

We want you to feel the same purpose and pride that we do and to have the same desire to deliver. We work hard because we care about the result and because we know it matters. If you are driven by the same purpose, and by the same desire to overcome challenge and complexity through technology then you will be right at home here.

Requirements:

- Hold a bachelor's degree in Computing Science, Maths, Physics or related field
- Experience developing software within a Micro-Service architectures. Significant experience working with Java 8 or higher.
- Experience of using SQL and no-SQL database applications, particularly Mongo
- Implementing Software Engineering best practice including Continuous Integration
- Have a good understanding of Test Driven Development (TDD) and Behaviour Driven Development
- Experience working as part of agile multi-disciplinary teams
- Experience of working in a Pair Programming environment
